ADV v2 under a bit of debug here, cause I'm not getting correct discharging current readings, devchip was kind enough to send a field assistant engineer to help us during the holidays, this is now 1st priority. And GTV is under mass production as we speak, I'm trying to beat the shipping schedule by 1 week and make sure you receive them by the end of May.

148 39

floatwheel 4 months ago

Here are all the dyno results, in the chart all boards were tested under the magbrake at 1.75w pushing the friction plate, the GT however would shut off mid test under 1.75w load (over current fault), I switched to 1.5w in order to get the stock GT to finish the dyno test. you can see the GTV Kit really takes all the potential out of the hypercore motor, at the maximum output, the magnet inside is ...

floatwheels.ru is down for a short period of time due to service.

May 1st edit: it's now back up and running.

75 30

floatwheel 5 months ago

We are at final revision (hope so) of the Adv v2 power electronics.

The v2 electronic system will be the most ridiculous system out there, just look at its power stage this is crazy, we use 100V 740A mosfets while the GTS is using 120V 230A fets.

floatwheel 6 months ago

V2 ESC first lay version. Let's get this to the manufacture and enjoy the rest of the weekend. I added a SD card slot in there, and it will come with a 8gb tf card for data/error logging, just like the black box on airplane. currently this is the only 100V controller that offers 12x toll mosfets in power stage, and 600V standalone gate driver. Given same heatsink it would outperform any ESC that's out there.

floatwheel 6 months ago

Currently designing a plug and play BMS for the pint and pintx and XR. I couldn't help but notice this horrible JAE ES9P002VFZR1600 charge plug that's known to burn, this plug is rated for 4A per leg, but under very light charging current (1.3A), it heats up to 46.3°C with good air circulation, it's gonna be hotter inside the box. So using pint hypercharger will definitely hurt this tiny plug here, in my design I...

Forget about their trade in,

Your GT's worth a lot more with the GTV kit! GTV beta testing units shipping out today!

With the GTV kit, your GT will smoke the GTS. In our dyno test, the GTV with GT stock motor will pull 4250w while the stock GTS can only do 3800w and if you put a TFL mte 5' hub on it, the torque will be...

I have found that the GTV kit users might desperately need the low boy footpad kit to really be as good as GTS, the low boy footpad really makes 50% of the improvements over GT's footpad, I find myself constantly twist my ankles ridding the stock GT, but perfectly OK when I'm riding the GTV with GTS low boy footpad. but 175\$ seems a lot for just 2x plastic pads, we will supply our version of ...

The dyno data of GTV (stock onewheel GT with floatwheel motor controller).
The result is amazing, GT with everything stock, just throw in a floatwheel motor controller, it beat the GTS in almost every way.
15% more power than GTS (4350w v 3781w).

what a shocker, the Pint's motor plug size is even bigger than the GTS's motor plug, they are hiding secret power in this Pint(GT is 2.2mm, pint is 2.37mm) but still, my early pint's motor plug burnt off on me, had to solder a cable to bypass it.

75 22

floatwheel 9 months ago

lol just bought a Pint, I mean you'd be stupid not to buy one at 750\$, almost 1/3 price of adv, I miss this small formfactor! Im gonna dino it and find out its power ratings, and vasc it to outperform GTS in that mountain!, I think this is gonna be really amazing to see 🤖🤖🤖

198 82

floatwheel 9 months ago

v2 electronics are up to paces, gonna get the BMS layout done in the next few days. new esc schematic out in today as well. the bms is constructed with a dvc1124 stack monitor and a stm32f103 as driver and communicator, the stm32 chip has a battery protection algorithm built in and it reads data from the dvc1124 stack monitor, the stm32 also controls precharge pre discharge and ...
